

“Good one Bob!”

Bob is the company's Chief Operating Officer and despite being a stickler for the rules he was a fairly popular guy. Twelve months ago Bob diligently put an email retention policy in place that he was confident would meet the company's compliance requirements, protect the Directors from litigation and help employees by letting them know where and how to file their email.

Not surprisingly the introduction of such a measure was seen by most staff as a bit of burden and for many the policy added several hours of work each week. Then recently, during a commercial dispute that required the company to find

supporting email correspondence Bob realised that his manual email retention policy was flawed.

After a brief discussion with the IT team Bob was excited to hear about **MailRevive™**, a new IT service that would automatically index and store the company's email without burdening the staff.

After a successful FREE 14 Day Trial Bob authorised the full deployment of **MailRevive™**. These days none of the staff have to waste their time classifying email and even the Directors are sleeping better – good one Bob!

How to save your business

MailRevive™ saves companies time and money in meeting commercial, legal and compliance demands of business email, protecting their IP and improving the productivity and knowledge of their employees.

Active Email Archiving

MailRevive™ active email archiving fully automates the indexing of corporate email, saving valuable time for employees and mitigating the risk of human error in email retention policies. Through an asynchronous indexing process the flow of email remains uninterrupted and email and attachments are archived as recovery ready.

How it works!

MailRevive™ is not a replacement for email but operates in conjunction with an existing email gateway or mail server. As it's transmitted email is filtered, indexed, archived, encrypted and stored automatically. Email users are provided on-demand access to a live archive to enable them to find and recover any of their deleted or old email without the need for any support from the IT department.
