

# “Wow James!”

James was an important person to the company – he kept the email system working. After a while in the role James became tired of spending hours looking through old backup tapes for email that staff had deleted or lost. With his IT reseller also pushing him to migrate to the new Exchange server James knew there must be a solution somewhere to help him.

As it turned out his very knowledgeable IT reseller was able to direct James to the most recent Synetek product, **MailRevive™**. After a 14 Day FREE Trial

of the service James knew he had the answer and implemented **MailRevive™** Enterprise Edition at the gateway.

Today co-workers say “WOW James”, as they can immediately perform recovery requests of their own email archive themselves, or ask James to undertake a more detailed recovery process across multiple mailboxes and even across multiple mail servers in different locations.

As an added bonus, when James deployed Exchange 2007 he was able to migrate records quickly and easily, allowing employees to retain 30 days of email locally and then providing each one a **MailRevive™** live archive for older email.

## How to save your business

**MailRevive™** saves companies time and money in meeting commercial, legal and compliance demands of business email, protecting their IP and improving the productivity and knowledge of their employees.

## Email Recovery

**MailRevive™** allows users email recovery via a single click, as a recovery attachment, as a PDF document, via a date range, or as part of a recovery package. For administrators **MailRevive™** also provides a centralised and secure interface for disaster recovery and evidentiary records recovery, across multiple mailboxes and mail servers.

## How it works!

**MailRevive™** is not a replacement for email but operates in conjunction with an existing email gateway or mail server. As it's transmitted email is filtered, indexed, archived, encrypted and stored automatically. Email users are provided on-demand access to a live archive to enable them to find and recover any of their deleted or old email without the need for any support from the IT department.
